(57) **ABSTRACT**

Described here are paranasal sinus devices for treating para-  
nasal sinus conditions. The devices include a cavity member,  
ostial member, and nasal portion. One or more of the cavity  
member, ostial member, and nasal portion may deliver an  
active agent for sustained release to treat the paranasal sinus  
condition. Exemplary paranasal sinus conditions are sinus  
inflammation due to functional endoscopic sinus surgery  
(FESS) and rhinosinusitis.
